

## SOMETHING NEW ON THE FLEXO GEARLESS MARKET

During the Plast show in Milano (5-9-May 2015) AMUT DOLCI BIELLONI will introduce the **Telia FSC 10 colour flexo gearless press** and will organize live demos on how the machine « repeats » the printing pressures (when changing a job) without any electronic additional equipment.

The Telia 10 colour is fully automatic and includes:

- Wash up system
- Viscosity control
- Pre-register and video inspection on 100% of the web
- Quality control
- Fully automatic unwinding and rewinding flying splice stations

The FSC system (patented in the entire world) is the fastest system on the market for sleeve changes and it is also the only system that **can cut down the scrap due to job changes**.

It is a fact that on the Telia machines the scrap is only 6-7 meters on the 8 colours, and 8-9 meters on the 10-colour model.

The Telia FSC system cuts the production costs, especially in case of several job changes during a shift: some customers are even changing seven – eight times job per 8-hour shift.

Its sturdy structure allows running at very high speed: the 10-colour presses are currently **running at around 500 m/min**.

On a Telia Gearless it is « economical » to print even only one or two rolls per job.
