

QUALITY AND HIGH SPEED ON THE NEW AMUT DOLCI WINDERS FOR STRETCH FILM

We are proud to announce that the **new 2-station winders ACP 2000 and ACP 3000** have achieved remarkable and unique results in production.

Some data of the productions speeds:

Hand rolls on 2" thin cores	600 m/minute (2000 feet/minute)
Hand rolls on 3" thin cores	700 m/minute (2300 feet/minute)
Machine rolls	750 m/minute (2460 feet/minute)

with a real splicing cycle of 16 seconds producing hand rolls with film of less than 180m/each.

The rolls are perfectly wound with no tail and perfect "mirror cut" edges.

We believe that these new winders are a real breakthrough in the market!

The winders are offered including automatic collecting system and weight control of each single roll; the cores are fed in one position and the finished rolls are collected all in one discharging point.

These winders have been designed to be supplied also on any existing line.

COME AND SEE A DEMO IN OUR PERMANENT SHOW ROOM IN BIASSONO, ITALY.
