

WHY CHOOSE A TELIA GEARLESS FLEXOPRESS?

You will get the answer when you come and test with your own plates our TELIA in our permanent show room:

because TELIA prints top quality at higher speed

because TELIA is the fastest flexo press in job changes

The new TELIA generation incorporates some outstanding features such as:

- The FSC system guarantees a fast and precise printing pressure adjustment;
- The mandrel holders of both plate and anilox sleeves are equally sturdy on both sides of the printing deck and are close to the shoulders of the sleeves;
- TELIA prints with exceptional quality even without carbon fiber mandrels;
- The operator opens the holders with no physical efforts (no parts to be cantilevered!);
- The recipes stored in the work-station are perfectly repeated and TELIA can restart production with 10 meters scrap.

All our TELIA flexo presses include a new on-line “after service” system!!
